Art Unit: 2857

1. Applicant cancelled claims 1-5, 14 and 17.

DETAILED ACTION

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 6-13, 15 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Reid et al. (U.S. 6,298,308).

As per claims 6 and 12, Reid et al. teach an acquisition unit remote from at least one of the stationary power stations for collecting measurement data detected by sensors in the power stations (see col. 2, lines 34-44 and col. 4, line 63 to col. 5, line 21); a diagnostics unit connected to the acquisition unit for classification of operating states of the power stations that are represented by the measurement data (see col. 9, line 44 to col. 10, line 10) a memory unit connected to the acquisition unit and the local diagnostics unit and the measurement data is centrally stored in the memory unit (see col. 5, lines 1-21); and a server unit connected to the memory unit that generates machine-readable data based on an HTML language (see col. 5, lines 59-65).

As per claim 7, Reid et al. further teach that portions of the machine-readable data are generated while a connection is established to the server unit of the

Art Unit: 2857

diagnostics system by at least one client computer via a communications link by an Internet browser installed on the client computer and the parts of the machine-readable data are requested by the client computer (see col. 6, lines 15-30).

As per claim 8, Reid et al. further teach that the machine-readable data is transferred from the server unit to the client computer by the TCP/IP protocol via the communications link that includes an intranet and/or the Internet (see col. 5, lines 50-65 and col. 9, lines 25-43).

As per claim 9, Reid et al. further teach that a dynamic operating and/or monitoring interface of the diagnostics system is formed by the machine-readable data (see col. 6, lines 40-67).

As per claims 10, 11, 13 and 16, Reid et al. further teach that the machine-readable data comprise HTML pages that are stored as pre-prepared, static data in a memory unit of the diagnostics system and arc generated dynamically by the server unit by combining a page generation code and at least part of the measurement data stored in the memory unit (see col. 6, lines 15-40).

As per claim 15, Reid et al. further teach that the measurement data from at least one of the power stations is transferred to the memory unit if there has been a change in an operating state of a power station concerned (see col. 6, lines 41-67 and col. 7, lines 1-22).

Response to Arguments

3. Applicant's arguments filed 6/27/07 have been fully considered but they are not persuasive.

Art Unit: 2857

Applicant argues that the acquisition and analysis units 16 of Reid et al. are local, not remote.

Examiner disagrees with the Applicant's argument because Reid et al. teach that the acquisition and analysis of data can be done remotely (see col. 7, lines 48-61 and Fig. 1) (location 34 is remote from site 12).

Applicant argues that Reid et al. do not teach HTML page generation.

Examiner disagrees with the Applicant's argument because Reid et al. teach requesting information from the local experts 16 in a web-based format (e.g. html files) (see col. 5, lines 60-65). The Examiner considers this to be HTML page generation.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 2857

Prior art

5. The prior art made record and not relied upon is considered pertinent to applicant's disclosure:

Barrett et al. ['838] disclose wireless test and measurement method.

Sharma et al. ['833] disclose method and apparatus for remote diagnosis for an ultrasound scanner.

Contact information

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohamed Charioui whose telephone number is (571) 272-2213. The examiner can normally be reached Monday through Friday, from 9 am to 6 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eliseo Ramos-Feliciano can be reached on (571) 272-7925. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
